

T-1600 Evaporative Snow Machine

- This is one of the quietest snow machines in the world. Designed for stage, movies, and performances where noise makes the difference, the T-1600 has a rating of 68 db @ 3 meters. DMX on-board with duty cycle timer (5 and 15 min repeat cycle timer) stand-alone settings.
- The T1600 “ Quiet Snow Machine” generates **evaporative** snow™ that normally dissipate completely when dispensed from 20-30 ft in the air. Mounting the T1600 at the specific elevation, relative to the generated flake size, is key to creating a “residue free” floor below the snow machine.
- Make it snow anytime, anywhere! The T-1600 is suitable for both indoor & outdoor use.
NO CLEAN UP: With T-1600 Evaporative Snow, clean-up is practically nonexistent! The snow evaporates within 90 seconds and leaves no sticky or slippery residue behind!
- ENVIRONMENTALLY FRIENDLY: T-1600 Evaporative Snow Fluid is biodegradable, non-toxic, non-slip, and flame retardant.
- LOOKS REAL: The T-1600 sends snow over 20 feet in the air. As it comes down, it looks just like snowflakes falling on a cold winter day.

Pricing:

T-1600

\$250.00

*UNIT COMES WITH SNOW JUICE WHICH CAN LAST A FEW HOURS ACCORDING TO THE MACHINE OPERATION.
